ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout my internship. I am thankful for their guidance, constructive feedback and professional advice during this work. I am sincerely grateful for the opportunity to gain practical exposure to business development activities in a collaborative organizational environment.

I would like to thank the team at BuildVerse for providing me the opportunity to work as a Business Development Intern and for allowing me to contribute to lead generation, market research, client engagement, outreach, proposal preparation and business support activities. The internship helped me understand how structured research, professional communication and follow-up contribute to business development.

I am also thankful to IILM University, Greater Noida, and the faculty of the School of Computer Science and Engineering for their continuous support and encouragement. I express my gratitude to my parents for their blessings.

4. PROJECT DESCRIPTION

4.1 Introduction

This report presents a detailed account of the professional internship undertaken at BuildVerse in the capacity of Business Development Intern from 4 March 2026 to 4 September 2026. The internship provided practical exposure to business development activities including lead generation, market research, professional outreach, client communication, follow-ups, proposal preparation and relationship-building. The work was focused on supporting the growth and business development initiatives of the organization while developing practical skills in communication, prospecting, analysis and sales support.

4.2 Organization Profile

BuildVerse was the organization in which the internship was completed. During the internship, the role was aligned with business development and involved supporting activities connected with client acquisition, market understanding and business growth. The internship certificate records contributions in lead generation and outreach, market research and opportunity analysis, and client engagement and business support. It also records proficiency in prospecting, business outreach, CRM practices and sales support, along with communication, negotiation, problem-solving, teamwork and adaptability.

4.3 Problem Statement

Based on the responsibilities performed during the internship, the practical problem addressed was how to support business growth through a consistent and structured process of identifying potential clients, researching target markets, conducting professional outreach and maintaining effective follow-ups. The work also required converting research findings into actionable business opportunities while supporting client communication, proposal preparation, relationship-building and sales-related activities. The internship therefore focused on applying business development practices in a real organizational environment and improving the efficiency and quality of these activities through research, communication and technology-assisted workflows.

4.4 Project Objectives

- To identify potential clients and business opportunities through market research and prospecting.
- To support lead generation and professional outreach for expansion of the organization's client network.
- To study industry trends, competitors and target markets to identify potential growth opportunities.
- To support client communication, follow-ups and relationship-building activities.
- To assist in proposal preparation and sales-support activities.
- To maintain and apply CRM practices for organized prospect and client management.
- To strengthen communication, negotiation, problem-solving, teamwork and adaptability in a collaborative business environment.
- To use AI-assisted workflows and research tools, including Kimi, data-scraping AI tools and Antigravity, to support research and business-development work.

4.5 Scope of the Project

The scope of the internship covered practical business development support activities from market and competitor research through prospect identification, lead generation and professional outreach. It also included client communication, follow-ups, proposal preparation, relationship-building, CRM practices and sales support. The scope further included the use of AI-assisted tools for research and workflow support, as described for Kimi, data-scraping AI tools and Antigravity. The internship was performed in the organizational context of BuildVerse and focused on supporting business development initiatives rather than on a single software-development product.

4.6 Technologies and Tools Used

- AI-Assisted Research and Workflow: Kimi for assisted research, drafting and information processing.
- Data-Scraping AI Tools: Used to support structured data collection and prospect/market research activities.
- Antigravity: Used as an AI-assisted workflow and development support tool during the internship.
- CRM Practices: Used for organized prospect tracking, follow-ups and business-development support.
- Research & Outreach Methods: Market research, competitor analysis, prospecting, professional outreach and client follow-up.

4.7 Work Architecture

The overall work architecture followed a structured business-development workflow that connected research, prospecting, outreach, engagement and follow-up:

- Research Layer: Industry trends, competitors and target markets were studied to identify relevant opportunities.
- Prospecting Layer: Potential clients and business opportunities were identified through market research and prospecting.
- Outreach Layer: Professional outreach was used to initiate communication with prospective clients.
- Engagement Layer: Client communication, follow-ups and relationship-building activities were supported.
- Proposal & Sales Support Layer: Proposal preparation and sales-support activities were carried out as part of the business-development process.
- CRM Layer: CRM practices supported organized management of prospects, communication and follow-ups.
- AI-Assisted Support Layer: Kimi, data-scraping AI tools and Antigravity were used to assist research and workflow-related tasks.

4.8 Methodology

The internship followed a structured business-development methodology based on the actual responsibilities performed at BuildVerse. The process connected market understanding and research with prospect identification, professional outreach, client engagement, follow-up, proposal preparation and sales support. AI-assisted tools were used where appropriate to improve research and information-processing efficiency.

Step	Methodology Stage	Activities Performed
1	Market & Requirement Understanding	Understanding business requirements, target segments and relevant market conditions before beginning prospecting.
2	Market & Competitor Research	Researching industry trends, competitors and target markets to identify relevant opportunities and prospects.
3	Lead Generation & Prospecting	Identifying potential clients and business opportunities and organizing prospect information for outreach.
4	Professional Outreach	Conducting professional communication with prospects to initiate conversations and expand the prospect network.
5	Client Engagement & Follow-up	Supporting client communication, timely follow-ups and relationship-building with a professional, customer-focused approach.
6	Proposal & Sales Support	Assisting with proposal preparation and supporting business-development and sales activities according to prospect/client requirements.
7	CRM & Information Management	Using CRM practices to organize prospect information, communication records and follow-up activities.
8	AI-Assisted Workflow	Using Kimi, data-scraping AI tools and AntigraVity to support research, structured data collection and workflow-related tasks.
9	Review & Continuous Improvement	Reviewing research and outreach outcomes and refining prospecting, communication and follow-up approaches.

This methodology integrated research and data collection with practical business-development execution. It emphasized disciplined prospecting, professional communication, timely follow-up and organized client information, while AI tools functioned as supporting resources for research and workflow efficiency rather than replacing business judgment or relationship management.

4.9 Expected Outcomes

- Improved practical understanding of lead generation, prospecting and business outreach.
- Ability to conduct market research and opportunity analysis using structured information.
- Improved professional communication, client follow-up and relationship-building skills.
- Practical exposure to proposal preparation, CRM practices and sales support.
- Greater confidence in negotiation, problem-solving, teamwork and adaptability.
- Hands-on experience in using Kimi, data-scraping AI tools and Antigravity as supporting tools for research and workflow activities.
- Better understanding of how business development activities contribute to organizational growth and client-network expansion.

4.10 Certificates of Completion

The Internship Certificate issued by BuildVerse confirms that TANISH GUPTA successfully completed a professional internship in the capacity of Business Development Intern from 4 March 2026 to 4 September 2026. The certificate records contributions in lead generation and outreach, market research and opportunity analysis, and client engagement and business support, together with proficiency in prospecting, business outreach, CRM practices and sales support.
